Aerospace

Market requirements

The aerospace industry combines almost all contemporary cutting-edge technologies and is dedicated to various types of flying objects and thus very complex large-scale systems. In order to comply with the strict safety requirements of the aviation authorities, customers mainly turn to suppliers with a certified quality management system. Customer focus, risk minimisation, process validation and traceability, among others, are required for the high-performance components and assemblies to stand up to the specifications.

Our know-how

BBC Cellpack Technology has a long history of processing a wide range of engineering plastics and metals and is certified to EN 9100, ISO 13485, ISO 9001 and ISO 14001. Decades of experience with a wide range of production technologies, a comprehensive and up-to-date machine park and extensive knowledge of materials make us the preferred machining specialist for all industries with statutory quality specifications. Our qualified team guarantees the manufacture and finishing of your precision products according to traceable and documented process specifications.

Your requirements

A current focus of development in aviation is light-weight system design. This is an important factor in making aircraft lighter and more fuel efficient. Structural components made of light metal or reinforced plastics not only reduce weight, but also enable the integration of complex functionalities. BBC Cellpack Technology is equipped to meet the high precision and quality requirements of demanding aerospace customers.

Our strengths

With its versatile machinery, a large network of technology partners, a flexible quality management system and great interest in new manufacturing processes, BBC Cellpack Technology is ideally equipped to meet almost any challenge. We offer solutions from a single source and are flexible with delivery dates, especially when ambitious target dates such as market launches are imminent. Thanks to our trading business, we have access to very specific and rare materials.

We deliver solutions

with the highest level of manufacturing expertise.

Your benefits

- The complete solution from a single source.
- Technical lead through the highest level of manufacturing expertise and specific industry knowledge.
- Able to deliver, even for special requirements.

ISO 9001 (Quality management)
ISO 13485 (Medical technology)
EN 9100 (Aerospace)
ISO 14001 (Environment)
