Medical devices

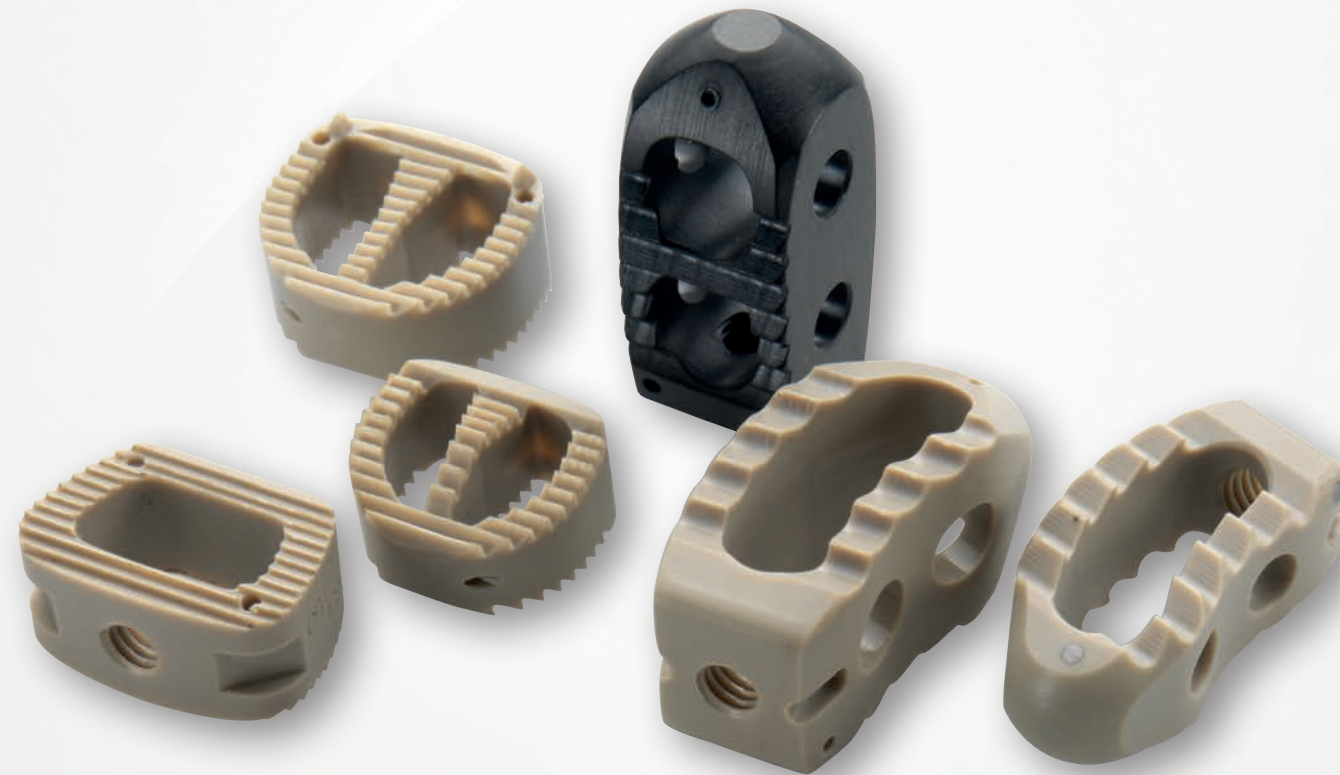

Market requirements

Distributors of medical devices are increasingly confronted with extensive regulations, and the MDR is setting the bar high. To meet these requirements, they are looking for solution providers with well-organised supply chains. Accountability for process validation is today much stricter and requires appropriate documentation. Reproducibility and traceability are important cornerstones for limiting risk, which apply to surface finishing, for example, just as they do to sterile packaging.

Our know-how

BBC Cellpack Technology has a long history of processing a wide range of engineering plastics and metals and is certified to EN 9100, ISO 13485, ISO 9001 and ISO 14001. Decades of experience with a wide range of production technologies and machines and extensive knowledge of materials make us the preferred machining specialist for medical technology. Our qualified team guarantees the manufacture and finishing of your precision products according to traceable and documented process specifications.

Examples

Instruments and implants are our passion. Screwdrivers or assemblies for endoscopy, implants for osteosynthesis, spinal or dental applications, ports for repeated drug administration or dialysis - once we know the functions of the assembly, we align the quality processes to the requirements and mould your product from plastics such as PEEK, POM, PPSU, PE-UHMW or stainless steels and titanium. Electropolishing, passivating, anodising, labelling, cleaning, sterile packaging and much more are part of our repertoire.

Our strengths

With its versatile machinery, a large network of technology partners, a flexible quality management system and great interest in new manufacturing processes, BBC Cellpack Technology is ideally equipped to meet almost any challenge. We offer solutions from a single source and are flexible with delivery dates, especially when ambitious target dates such as market launches are imminent. Thanks to our trading business, we have access to very specific and rare materials.

We deliver solutions

with the highest level of manufacturing expertise.

Your benefits

- The complete solution from a single source.
- Technical lead through the highest level of manufacturing expertise and specific industry knowledge.
- Able to deliver, even for special requirements.

ISO 9001 (Quality management)
ISO 13485 (Medical technology)
EN 9100 (Aerospace)
ISO 14001 (Environment)
